SUMMARY

IT systems administrator and developer with 1 year of hands-on IT support, a full-stack web background, and growing AI engineering skills. Built and deployed a production retrieval-augmented (RAG) AI assistant for a freelance executive client, from the retrieval pipeline and LLM integration to the embeddable UI, security and cloud deployment. Skilled at troubleshooting Windows and macOS, managing Active Directory and Office 365 accounts, and turning business requirements into working software.

TECHNICAL SKILLS

- **AI Engineering:** LLM APIs (Abacus.AI RouteLLM, Anthropic Claude), retrieval-augmented generation (RAG), BM25 search, prompt engineering, streaming responses (SSE)
- **Languages:** TypeScript, JavaScript, Python, C++, HTML/CSS
- **Frameworks / Tools:** Node.js, Express, React.js, Next.js, Firebase (Firestore, Auth, Cloud Functions), Git, Playwright, Render, Vercel
- **IT Administration:** Windows and macOS support, Active Directory, Office 365, networking and Wi-Fi, workstation setup, user access management
- **Concepts & Data:** REST APIs, real-time data, responsive UI, web security (CORS, rate limiting, access control), Agile/Scrum, MySQL, Firestore

EXPERIENCE

Freelance AI / Web Developer | Self-employed **Oct 2026 – Present**

AI Resume Assistant for an executive client (CIO/CTO)

- Designed, built and deployed a RAG chatbot that answers recruiters' questions from the client's resume and Q&A, installed on any site (including WordPress) with one script tag.
- Built the retrieval pipeline in Node.js/Express: documents are chunked by section and Q&A pair into a BM25 index that is cached to disk and rebuilt only when content changes; the top passages ground every answer.
- Integrated LLMs behind a provider-agnostic layer (Abacus.AI RouteLLM and Anthropic Claude) with streamed answers; engineered the system prompt to stay factual, infer in the client's favor, and share their booking link.
- Developed an embeddable Shadow DOM chat widget with an animated robot mascot (waving, cursor-tracking eyes) and brand-matched themes, plus owner-only tools inside the chat: password login, Word (.docx) upload and automatic name detection.
- Hardened for production with origin locking, per-visitor and daily request caps to bound API costs, and timing-safe auth; deployed two services on Render via an infrastructure-as-code Blueprint; tested with Playwright and unit tests.

Texas Auto Buy **Nov 2024 – Jan 2026**

IT / Systems Administration Intern

- Served as subject matter expert and business analyst for an AI-driven vehicle pricing system, translating automotive purchasing logic into technical requirements and aligning the roadmap with dealership goals.
- Led user acceptance testing (UAT) of AI-generated pricing features before release, reducing post-launch errors, and documented business rules and edge cases for more accurate predictive models.
- Provided day-to-day IT support: diagnosed workstation and software incidents, and troubleshot network, Wi-Fi and printer issues, escalating to vendors and ISPs.
- Set up and maintained employee workstations; managed user accounts, permissions and password resets; supported staff on an AI-based vehicle acquisition tool.

Paciugo and Which Wich **Sep 2018 – Jan 2023**

Manager

- Helped open a new Paciugo location and led high-volume, customer-facing daily operations at both businesses; trained and coached teams and enforced quality, safety and service standards.

PROJECTS

Personal Portfolio with AI Assistant **2026**

- Responsive portfolio site where the same RAG assistant answers visitors' questions about my experience, deployed as its own Render service from a shared codebase.

Doctor Finder **Team project**

- Team web app to search and compare doctors by specialty, location and insurance; built responsive React components and a Firebase back end (Firestore, Auth, Cloud Functions) with real-time updates in Agile/Scrum sprints, deployed with CI/CD on Vercel.

EDUCATION

University of North Texas **Expected 2026**

B.S. Computer Science · Coursework: Data Structures & Algorithms, Databases, Operating Systems, Networks, Web Development

AI Engineering Training **In progress**
