SUMMARY

IT Systems Administration professional with 1 year of hands-on support experience and a background in full-stack web development. Skilled at troubleshooting Windows and MacOS hardware and software issues, managing Active Directory and Office 365 accounts, and monitoring network performance. Proven ability to streamline operations through technical documentation and proactive system maintenance.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, Python, C++, HTML
- **Frameworks/Tools:** React.js, Next.js, Firebase (Firestore, Auth, Cloud Functions), Vercel, Git
- **Concepts:** REST APIs, real-time data, responsive UI, accessibility basics, Agile/Scrum
- **Databases:** MySQL, Firebase Firestore

EDUCATION

University of North Texas

2026

B.S., Computer Science

- **Coursework:** Data Structures & Algorithms, Databases & SQL, Operating Systems, Computer Networks, Web Development

EXPERIENCE

Texas Auto Buy

Nov 2024 - Jan 2026

IT / Systems Administration Intern

- Served as subject matter expert and business analyst for an AI-driven vehicle pricing system, translating complex automotive purchasing logic into functional technical requirements.
- Liaised between business stakeholders and the engineering team, clarifying requirements and aligning the development roadmap with dealership operational goals.
- Led User Acceptance Testing (UAT) by designing test cases and validating AI-generated pricing features prior to production release, reducing post-launch functional errors.
- Optimized the software development lifecycle (SDLC) by documenting business rules and edge cases for vehicle valuation, enabling the dev team to build more accurate predictive models.
- Provided day-to-day IT support for staff, diagnosing and resolving workstation and software incidents to maintain operational continuity.
- Supported an AI-based vehicle acquisition tool by helping staff use the system, monitoring issues, and ensuring it remained functional during daily operations.
- Set up and maintained employee workstations: installed/configured applications, performed basic troubleshooting, and ensured devices were ready for use.
- Managed user access tasks, including account setups, permission updates, and password resets.
- Troubleshot network connectivity, Wi-Fi, and office systems such as printers; coordinated escalations with vendors and ISPs.
- Improved operational efficiency by documenting common fixes and creating repeatable setup steps for new devices/users.

Paciugo

Jul 2020 - Jan 2023

Manager

- Played a lead role in the opening of a new store location, managing the physical and employment infrastructure and establishing daily operations.
- Led daily store operations in a customer-facing, high-volume environment; ensured smooth shift execution and strong customer experience.
- Trained and coached team members; helped enforce quality, safety, and service standards.

Which Wich

Sep 2018 - Jan 2023

Manager

- Supervised daily operations and team performance while keeping service standards.
- Maintained an organized work area and strict rules for safety and food protocols.
- Demonstrated reliability through long-term employment and consistency.

PROJECTS

Doctor Finder

- Built a web app that helps users search for and compare doctors by specialty, location, and insurance; displays ratings/reviews and profile details.
- Built the project in Agile/Scrum sprints, participating in sprint planning, daily standups, sprint reviews, and retrospectives to deliver incremental features on schedule.
- Maintained and executed sprint work in a shared backlog (user stories, priorities, and acceptance criteria), coordinating tasks across teammates and tracking progress through each sprint.
- Estimated and scoped user stories and broke features into small, testable deliverables to improve velocity and reduce last-minute bugs.
- Collaborated via code reviews and pull requests throughout each sprint, resolving blockers quickly and maintaining code quality.
- Designed and implemented key frontend components with responsive, mobile-friendly UI and improved usability through iterative feedback.
- Implemented backend architecture using Firebase (Firestore, Auth, Cloud Functions) to support real-time data fetching and dynamic profiles.
- Added real-time updates/notifications using Firestore listeners; deployed with CI/CD on Vercel.
- Collaborated in a team setting with weekly check-ins, code reviews, and shared ownership of features and bug fixes.
